

Treatment for Coccidiosis for Goats

Sulfadimethoxine Brand Names:

Albon Concentrated Solution 12.5%

Albon Soluble Powder 107 gm pkg

Di-Methoox Concentrated Solution 12.5%

Di-Methoox Soluble Powder 107 gm pkg

Concentrated Solution 12.5% - Straight from the bottle; do not mix with water.

Administer/Drench directly into mouth

Soluble Powder mixed as follows: dissolve one package (107 gms) in three cups of water. Keep refrigerated. Administer/Drench directly into mouth

Give Orally - Administer straight into the mouth using a syringe without a needle. Do not add it to the kid's water because you will not know if they receive the correct dose. Do not add it to the milk because the milk effects the potency of the drug.

Five day treatment - you must treat the full five days.

Day one: 1 ml per 5 pounds- given orally.

Days 2-5: 1 ml per 10 pounds- given orally.

Note: Sweeten the drench with a little Stevia; our kids no longer stand around gagging after their treatment and some even seem to like it. (a spoon full of sugar helps the medicine go down...)
